OSPF (Open Shortest Path First)

OSPF without Virtual-link

Design the following network in Packet Tracer. Use OSPF protocol for dynamic routing. Ensure that each PC can communicate with each other.

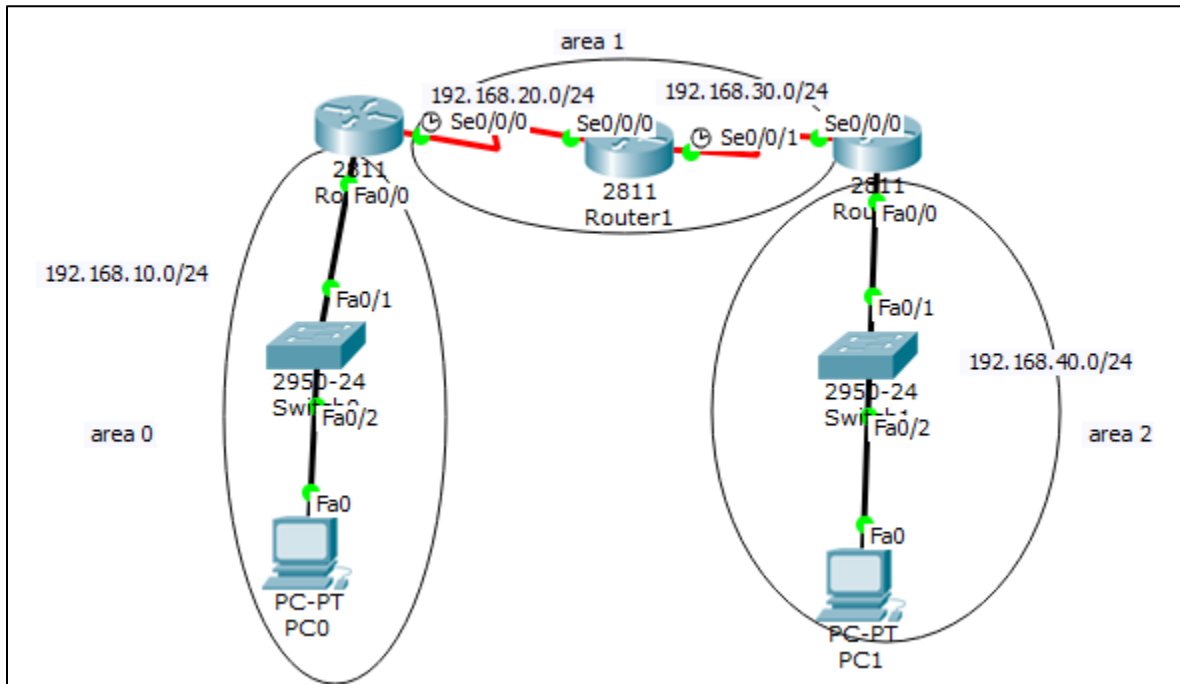

Step-1: Configure Router0, Router1, Router2 and PCs.

Step2: Apply OSPF to each of the router to ensure that each PC can communicate with each other.

OSPF with Virtual-link

Design the following network in Packet Tracer. Use OSPF protocol for dynamic routing. Ensure that each PC can communicate with each other.

Step-1: Configure Router0, Router1, Router2 and PCs.

Step2: Apply OSPF to each of the router to ensure that each PC can communicate with each other.
